

Secured Storage Areas meet D.E.A. approval

Compliance with Drug Enforcement Agency regulations for in-plant security of controlled substances presents recurring problems for drug manufacturers, distributors, and wholesalers. Wire Crafters Style 840 Partitions can help solve this problem. When properly installed, Style 840 Partitions meet the D.E.A. requirements for physical security of Class III, IV, and V controlled substances as outlined in Section 1301:72 of the Code.

Floor to ceiling secured area.

Style 840 Partitions use twenty standard size panels to build any height wall or clear span ceilings up to 35 feet wide. The panels mount to two inch square tubular posts. A full line of standard size self-closing, self-locking, hinged and sliding gates complete the line.

Most enclosures can be built from standard modular parts. However, we are glad to accommodate custom applications and can handle any special requirements your installation may need.

DEA approved storage area with clear spanned ceiling.

Style 840 Features

- Panels mount flush to floor.
- Self closing, self locking doors.
- Clear spanned ceilings up to 35'.
- Heavy 3/8" assembly hardware hidden from exterior.
- Panels stack to any height.
- 10 ga wire woven into 2" x 1" opening mesh standard.
- Any opening mesh available.
- 2" square posts set on maximum 10'-2" centers.

Drug Industry's Special Needs

Class III, IV, and V controlled substance storage areas require a high level of security to pass D.E.A. inspections. Such an installation-as pictured above left-has many notable features.

Panels mount flush to floor.

Panels mount flush to floor. Modifying the hole layout on our stock posts eliminates the sweep space and allows the panels to mount flush to the floor surface. No other changes are necessary.

Mounting hardware permanently fixed. Although our standard 3/8" mounting hardware is the heaviest in the industry, and inaccessible from outside the enclosure, the D.E.A. requires that all mounting hardware be brazed, pinned, or tack welded in place. Style 840 eases this job by allowing the installer clear access to the hardware from inside of the cage.

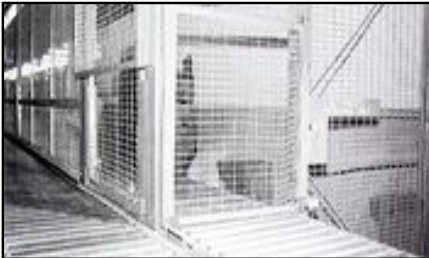

Factory made cutouts fit around building structure.

Factory made cutouts. D.E.A. regulation does not allow gaps between the enclosure and the building structure. Our angle frame panels can be made with cutouts to fit your building structure, or they can be modified in the field by the installer. In either case our design gives you an economical custom fit.

Self-closing, self-locking doors. D.E.A. regulation requires the enclosure's doors to be self-closing and self-locking. All of Wire Crafters standard doors can be ordered with devices which satisfy this requirement.

Slide up window. Various sized slide up windows are available for integration with existing material handling systems. Wire Crafters offers a complete line of counter-balanced, mechanical, and pneumatically operated windows for this purpose. These windows may be sized to meet your specific material handling needs.

Slide up window integrates with material handling conveyor.

There is no better woven wire partition for building secured storage areas than Wire Crafters Style 840 Partitions. Please contact your local material handling dealer, email, or call us at 800-626-1816 for service, pricing, or more detailed information about our product. **Remember, insist on genuine Style 840 Partitions from Wire Crafters.**
